**Proven Bar Feed Performance For Precision Parts Made
From .039" to .500" Bar Stock Diameters**

February 10, 2005 Cincinnati, OH – The Tryton® 112 automatic bar feed system from LNS America, Inc. was originally developed for manufacturers of Swiss watches and other small, high precision parts made on Swiss style or sliding headstock lathes.

Today, Tryton is also favored by makers of medical products, electronic instruments and other demanding applications. The combo barrel design provides vibration-free operation from .039" to .500" without guide channel changes. An easy-to-use remote control simplifies programming and the up to 45 bar capacity insures hours of continuous, uninterrupted operation. Tryton 112 is the only 12-foot bar feed for 1mm diameter stock in the industry field-proven for over 35 years.
